EXPERIENCE

Bukra, ***CTO / Co-founder*** *June 2026 - Present*

- Co-built a transport booking platform for buses, flights and parcels, live in six African countries, with a booking site, operator dashboard and portals for airlines and agents (Next.js, TypeScript, Express, PostgreSQL)
- Integrated five payment providers (M-Pesa, MTN MoMo, PawaPay, PayGate, Stripe), handling refunds, payouts and provider outages
- Built an AI booking assistant on the web, WhatsApp and Messenger, plus USSD booking for basic phones, using Claude with tool calls into live trip, seat and booking data
- Made the AI provider switchable between Anthropic and AWS Bedrock with a configuration change, and added per-user spending caps so abuse can't run up costs
- Shipped in four languages (English, French, Arabic, and Swahili), with CI that fails when a translation is missing

Crossbeam Inc., ***AI Associate, Trace (tracedata.ai)*** *Jan 2026 - Sep 2026*

Trace is Crossbeam's AI-native company intelligence dataset (1M+ companies, 30K+ technology vendors), served through MCP, a REST API and a web app

- Designed Claude API prompts and structured-output schemas that turn crawled web signals into evidence-backed vendor and technology records
- Led data quality for LLM-based technology detection: built an automated evaluation system that checks each detection against its source evidence, so accuracy was measured on every change instead of spot-checked
- Used it to find and fix systematic false positives, raising precision from 30% to 80% on the detection classes I was responsible for
- Contributed to Trace's Python/FastAPI backend and web crawl pipeline on PostgreSQL
- Shipped 20+ production features in 8 months, using Claude Code across build, test and debug

HomeSource Systems, ***System Implementation Specialist*** *Jun 2025 - Nov 2025*

- Rolled out ERP and point-of-sale systems on-site at 5+ client locations, handling integration, configuration and staff training to drive adoption
- Documented system functionality, workflows and user procedures for HomeSource's largest enterprise client, working with the software team lead
- Worked with product managers, QA and engineering teams to find system bottlenecks and improve the deployment process

Harvard University, ***Research Assistant*** *Jun 2023 - Aug 2023*

- Applied statistical methods and data visualization techniques to analyze complex biological data, contributing to research findings

EDUCATION

Franklin & Marshall College

B.A., ***Computer Science;*** *Minor in* ***Studio Art*** *• Aug 2021 - May 2025*

SKILLS

Languages: TypeScript, Python, SQL, JavaScript, Java, C++
Frameworks: Next.js, React, Node.js/Express, FastAPI, LlamaIndex
Data & infrastructure: PostgreSQL (Supabase), Redis, AWS, Docker, Vercel, Railway, GitHub Actions
AI: Claude API, AWS Bedrock, MCP, tool calling, structured outputs, LLM evaluation, prompt engineering, QLoRA fine-tuning, LangGraph, Ollama

PROJECTS

Cellar: AI Customer Support Agent | cellar-support.vercel.app | github.com/rama-kata/support-agent

- A LangGraph support agent that asks before irreversible actions and checks its replies against the database before they reach the customer; passes 79 of 81 test conversations
- Fine-tuned a 3B model with QLoRA to 98.1% intent accuracy, vs 80.7% for the same model prompted; runs on local GPUs, with a public live demo

FastBreak: NBA Stats Agent (in progress) | github.com/rama-kata/FastBreak

- Built a text-to-SQL agent over a nightly-updated SQLite stats database; every answer shows its SQL and rows, and replies with numbers not in the results are blocked
- Raised accuracy from 40% to 88% on a 50-question test set scored by correct rows, running Qwen3-14B locally on consumer GPUs
- Added routing between fast and step-by-step reasoning modes, reaching 80% accuracy at ~60% of the model time per correct answer

ACTIVITIES

Men's basketball: *Franklin & Marshall (2025 Centennial Conference champions, NCAA Tournament); NABC Honors Court (2×)*
